KITCHEN SINKS

TOOLS

1. Hand Scrub Brush
2. Tooth brush
3. Plastic knife
4. Cloths

PRODUCT

1. Glass Cleaner
2. All Purpose Spray
3. Non-abrasive Scrub
4. Grout Cleaner

TIPS ON TOOLS & PRODUCT

1. Use the glass cleaner for light cleaning and the all-purpose for the heavier cleaning
2. The spray bottle can be a powerful dirt remover when the nozzle is in the high density stream position. Placed close to built-up corner the spray will loosen the dirt so that you may easily wipe away
3. Grout Cleaner doubles as a disinfecting spray for inside sinks and outer edging.

BELIEVE IT OR NOT

These dots represent commonly missed areas

The area behind the sink

Build up around edges where tap meets sink

The outer edge of sink not scrubbed

Tap handles, especially underneath

The drain opening not scrubbed as well as the drain stopper

Spray around outer edge of sink, especially at the back, with grout cleaner (doubles as disinfectant). It should start to bubble and turn white..don't panic, it's cleaning

Spray inside of sinks and around taps with all-purpose spray

Use toothbrush or hand held scrub brush and scrub all around the outer edges of sink as well as around taps

Dip dampened cloth in to non-abrasive scrub and start scrubbing the inside of the sinks. Start with the top, working in a clockwise fashion and finish with the bottom. Re-dip cloth into scrub whenever necessary. Do not forget scrub drain opening and drain stopper.

A mixture of grout cleaner and non-abrasive scrub works good in porcelain sinks

Spray sink area with glass cleaner, making sure to get taps and faucet, starting at the taps, clean and polish dry (check for any smudges or stuck on food particles), clean and polish outer edge of sink and then finish with removing residue from inside of sink. With a new cloth, re-spray inside of sinks and polish dry

Quick Tip

Kitchen sinks should always be the last on your list to do as it is always needed during the clean.

Bathroom Sinks

TOOLS

1. Hand Scrub Brush
2. Paint Brush
3. Tooth brush
4. Plastic knife
5. Cloths
6. Flat Mop
7. Q Tips

PRODUCT

1. Glass Cleaner
2. All Purpose Spray
3. Non-abrasive Scrub
4. Grout Cleaner

TIPS ON TOOLS & PRODUCT

1. Use the glass cleaner for light cleaning and the all-purpose for the heavier cleaning
2. The spray bottle can be a powerful dirt remover when the nozzle is in the high density stream position. Placed close to built-up corner the spray will loosen the dirt so that you may easily wipe away
3. Grout Cleaner doubles as soap scum remover
4. Vinegar (white equal parts water and vinegar) in a spray bottle will clean hard water the best (always wear a mask and safety glasses when working with vinegar in a high pressure mode – spray bottle – as the fumes can be dangerous to breathe in and your eyes will sting if you get any in them)

BELIEVE IT OR NOT

These dots represent commonly missed areas

 Under the tap where toothpaste splatters

 Drain opening not scrubbed properly

 Around the edges of sink not scrubbed

 Behind the sink and taps

Other areas missed are

1. The pedestal on pedestal sinks
2. The outer bowl on pedestal sinks
3. The concaved area behind pedestal sinks
4. The exposed water valve and hose
5. The rubber seal around sinks

Spray around outer edge of sink, especially at the back, with grout cleaner (doubles as disinfectant).

Spray inside of sinks and around taps with all-purpose spray

Use toothbrush or hand held scrub brush and scrub all around the outer edges of sink as well as around taps

With a cloth, wipe out inside of sink, removing soap scum and toothpaste droppings

Spray sink area with glass cleaner, making sure to get taps and faucet, starting at the taps, clean and polish dry (check for any smudges or stuck on toothpaste), clean and polish outer edge of sink and then finish with polishing of inside sink

Make sure you clean and polish the outside of sink bowl.....front, back and sides

These sinks have a recessed inner edge that if not properly cleaned will grow mould.

Spray the underside with grout cleaner and scrub with hand held scrub brush

This sink has a rubber seal circling it. This seal catches dirt and hair. The best way to clean it is to wrap your cloth around the plastic knife and just using the very tip of the knife insert between seal and sink. Run the knife around in a clockwise fashion and you will watch as it pushes the debris out. Repeat if necessary.

Make sure to clean under the exposed sink area, the pedestal and pedestal base

Polishing areas to a shine instead of just leaving to dry natural gives a better end result

It is very important to scrub around tap bases as neglect leads to pink mould

With just a screwdriver, hot soapy water to soak in, a toothbrush, plastic knife and q-tips a neglected tap casing can look like new again
