MICROWAVES

TOOLS

1. Tooth brush
2. Plastic knife
3. Cloths

PRODUCT

1. Glass Cleaner
2. Grout Cleaner
3. All-Purpose
4. Non-Abrasive Scrub

TIPS ON TOOLS & PRODUCT

1. The toothbrush and plastic knife work on removing build up on edges, in corners and crevices
2. Dwell time is what makes cleaning easier. Spray areas that are in need of extra attention and let sit while you work on other areas.
3. The Grout Cleaner does double duty as a “grime buster” and disinfectant

BELIEVE IT OR NOT

These dots represent commonly missed areas

The back of the microwave where the vent is

The back of and sides of the door handle

The counter under the microwave, if it can be lifted with one hand it can be cleaned

The recessed edges of the glass

The edges and bottom lip of front opening

The inside of the door

The ceiling of inside the microwave

The inside corners and edges

Removing the tray to properly clean

The push action for opening door

Remove glass spin tray. Place in sink and spray with all-purpose and let sit

Spray inside with all-purpose cleaner and let sit for a few minutes.

Spray the outside with glass cleaner (all-purpose if heavily soiled) and wipe. Use toothbrush to remove build-up in crevices and edging. Remember to clean the back as well. Wipe and polish dry

Wash handle using toothbrush to get in the crevices as needed

Polish glass and function area

Wipe cord and plug

Wash glass insert top and bottom with all purpose, or soak in a sink of hot soapy water if necessary

Replace glass insert once washed and dried

When the microwave is located on a shelf it is difficult to clean the sides properly. Run your duster along the top, sides and underneath to remove dust and debris

Microwaves over stoves have a built in vent and light system underneath. Follow the same method for stove vent explained in Just Stoves manual.

Grease and dirt build up behind microwaves. Spray a cloth with glass cleaner (heavy build up, use all-purpose and wipe. Repeat if necessary. Polish dry

Neglected side of microwave fixed in minutes. Dip dampened cloth (sprayed with glass cleaner) in to non-abrasive scrub and gently scrub out the grease and food spillage. Spray area with glass cleaner and wipe. Polish dry

Melted plastic from bread bag fixed in minutes. Dip dampened cloth (sprayed with glass cleaner) in to non-abrasive scrub and gently scrub out the grease and food spillage. Spray area with glass cleaner and wipe. Polish dry

When it comes to metal vents, you do not want to get your fingers in there. The edges are extremely sharp and can quickly split your skin without you feeling it.

If the stainless microwave has never had a conventional stainless polisher used on it, you can get a shine like this with just the glass cleaner and a clean dry cloth to polish.

If you need to remove grease spots from stainless, dip your cloth in to the non-abrasive scrub and going with the grain, rub in to stained area. Use cloth dampened with glass cleaner to remove residue from scrub

If a conventional stainless polisher has been used the best way to easily polish is to have a spray bottle of 1/3 cup of olive oil and filled with water. Shake and spray onto cloth, wipe following the grain and then with a dry clean cloth, polish to a shine

DISHWASHERS

TOOLS

4. Tooth brush
5. Plastic knife
6. Cloths

PRODUCT

5. Glass Cleaner
6. Grout Cleaner
7. All-Purpose
8. Non-Abrasive Scrub

TIPS ON TOOLS & PRODUCT

4. The toothbrush and plastic knife work on removing build up on edges, in corners and crevices
5. Dwell time is what makes cleaning easier. Spray areas that are in need of extra attention and let sit while you work on other areas.
6. The Grout Cleaner does double duty as a “grime buster” and disinfectant

BELIEVE IT OR NOT

These dots represent commonly missed areas

-  The outer edges where food spillage occurs quite often as well as under the function panel
-  The vent and recessed handle
-  The recessed edges of control panel
-  The kick plate

The control panel

The gasket/sealant where mould and dried food linger

The edges, especially the food build up around the screws

The handle, especially the back of the handle

Open door of dishwasher. Spray inside door and sides with all-purpose spray. With the hand held scrub brush, scrub all sides including along top and bottom. Pay close attention to crevices and the indented screws.

Spray gasket/seal area with all-purpose spray and scrub with hand held scrubber

Wipe down inner door, gasket/seal area and sides. Spray again and polish dry

With a dampened cloth sprayed with glass cleaner (all-purpose if heavily soiled) and wipe all outside edges of dishwasher door, making sure to get in between bottom of door and top of motor casing. Do not forget to wipe kick plate.

Spray hand held scrubber with glass cleaner and use to scrub vent and recessed handle area to remove built up dirt. Wipe with a dampened cloth(sprayed with glass cleaner) and polish dry

Wipe front of dishwasher and handle if applicable with dampened cloth (sprayed with glass cleaner)

If the stainless dishwasher has never had a conventional stainless polisher used on it, you can get a shine like this with just the glass cleaner and a clean dry cloth to polish.

If you need to remove grease spots from stainless, dip your cloth in to the non-abrasive scrub and going with the grain, rub in to stained area. Use cloth dampened with glass cleaner to remove residue from scrub

If a conventional stainless polisher has been used the best way to easily polish is to have a spray bottle of 1/3 cup of olive oil and filled with water. Shake and spray onto cloth, wipe following the grain and then with a dry clean cloth, polish to a shine
